Meditation on the depleting battery on my iphone

Soon, I won't be able to book a taxi to get me out of here; I won't be able to look up the weather systems in Shanghai or take macroscopic pictures of flowers in my garden; I won't be able to buy tickets to a band that I don't really understand (saved on my Spotify and Bandcamp accounts) and put these tickets in my wallet on my homescreen: I cannot look up the Latin names of the flowers in my garden or post them online to friends and family on my insta account: I am disabling my background data: I am switching off push notifications: My Apps like Netflix, Youtube and Spotify are making me waste away: Too many notifications, too many notifications, [redacted] many notifications [redacted] many notification[redacted], too many notifications, ~~too many n[redacted] Too [redacted], too many [redacted], too many [redacted] Too many notifications, [redacted] many notifications, too many notifications~~: I require the use of GPS with chrome, maps, pay and play: I am adjusting my settings: Time is displayed in increments, not seconds, but the trickle of energy loss, always a percentage: Am I one hundred percent? Too many notifications, ~~too many notifications [redacted]~~, too many

notifications: This might happen: will usually get worse over time: This can happen in sudden steps: this is happening: with periods in between where the symptoms do not change much: but it's difficult to predict when this will happen: Too many notifications: But treatment can sometimes help slow down: Treatment aims to tackle the underlying cause, which may reduce the speed at which brain cells are lost: This might happen: will usually get worse over time: but the trickle of energy loss: look for any changes that have happened in your brain: I am disabling my background data: My Apps like Netflix, Youtube and Spotify are making me waste away: but it's difficult to predict when this will happen: and there's no way to reverse any loss of brain cells that happened before this condition was diagnosed: There's currently no cure: this is happening:
